

Understanding the PRO-
Development™:
Validation Report 2.0
Updated July 2019

THE PRO DEVELOPMENT™ ASSESSMENT TOOL (PRO-D)

Section I: Origins & Theoretical Underpinnings of the PRO Development™

One of the keys to effective leadership development and career satisfaction is a strong understanding of who one is. According to research, leaders with greater self-awareness are viewed as more effective and able to drive greater performance across the teams they lead in both personal and professional settings ([Association for Talent Development, 2019](#)). The question of who one is though poses great complexity. For example, psychologists will often focus on the personality or stable individual trait differences that explain who one is as a leader. A host of instruments (i.e. Myers-Brigg) help generate these insights for leaders to become more self-aware of their personality. Organizational behaviorist, on the other hand, often consider the environment or group influences on leadership style, which is much more malleable and contextual. Again, a host of tools offer insights into one's style depending on the role or organization they serve (i.e. DiSC).

However, these tools provide just a glimpse into one aspect of the complexity underlying who one is as a leader. The most effective leadership development and career counseling is facilitated when one can see a more holistic view of oneself. This comprises of both their personality traits as well as the way they respond to the environment, which includes their communication style, current role and organizational culture. In the academic literature this is referred to as [person-environment fit](#) (P-E). The goal of successful leadership development is to facilitate a good fit between who one is and the environment in which they lead. According to person-environment fit theory, when there is a misalignment between who one is and their environment, stress rises and impairs their leadership effectiveness. In addition, poor person-environment fit can lead to career dissatisfaction. To determine the level of misalignment requires sophisticated analysis and a battery of both well-established and proprietary assessments. Prior to the introduction of computer-based algorithms, the ability to capture with data the fit between person and environment was limited. However, powerful data analytics combined with rigorous assessments now offers an opportunity to provide a comprehensive framework to interpret one's own inherent leadership preferences, while also discovering the fit to their current environment. This deep level of self-awareness allows leaders to better respond to changes in their environment, identify points of tension and more fully align their personality to their environment. In doing so, leaders are equipped with a profound level of self-awareness and can make data-driven decisions as they chart their leadership development and career choices in order to achieve optimal congruence between one's personality and environment.

The origins of the PRO Development™ tool

The PRO-D™ is a career alignment tool that helps individuals understand how their unique set of Missions, Competencies, and Styles (MCS) can be simultaneously expressed and experienced in a number of different career choices. In order to organize MCS around a cohesive framework, PRO-D™ utilizes a set of nine archetypes. These archetypes were identified after an exhaustive review of the literature and consideration of multiple models. Taken individually, the archetypes describe elements of behaviors, attitudes, and thoughts. However, when combined, they describe types and classes of people and constellations of behaviors, attitudes, and thoughts.

These archetypes allow us to determine how MCS manifests itself in specific roles and ultimately how missions, competencies, and styles converge to identify roles that consider each of these dimensions simultaneously. The convergence process is more than “a sum of the parts” and the algorithms vary depending on data provided by the individual client.

The concept of convergence is not a new one and is fully discussed in the writings of Savickas [Savickas, Mark L. and Lent, Robert W. (1994). *Convergence in Career Development Theories*. Palo Alto, CA: CPP Books.]. During the early 1990's, Savickas and other leading career theorists were calling for a new, comprehensive, fully convergent model to articulate, measure and integrate competencies, motivations and style factors. A team of researchers developed such a system, after a thorough review of hundreds of instruments and career counseling and development programs. Based upon these works, this assessment was developed to measure the three core tenants of Mission, Competency, and Style. In 2003, TAI secured the exclusive rights for PRO-D™.

In the early 2000's, existing tools with demonstrated reliability and validity were selected for convergence, for example, the Enneagram, DISC, Life Styles Inventory, and Organizational Culture Inventory. However, over time, the research team has developed and tested its own specific set of proprietary tools and created the algorithms necessary to create highly individualized convergent models. Over time, these tools and algorithms have become increasingly refined, accurate, and efficacious in providing clients with multiple career options.

The purpose of the PRO-D™ tool

The PRO-D™ is a career intelligence system founded on the belief that people will be fulfilled and productive when placed in a role or organization that simultaneously engages their individual Missions (*drivers*), Competencies (*abilities*), and Style (*personality*). Traditional career counseling and leadership development instruments have mostly focused on one or two of these dimensions. However, simply discerning that an individual has the personality for a certain position does little to ensure that they also have the abilities or even motivation necessary for that role. This limited one-dimensional approach does not appropriately consider the complexity of human nature nor one's individual differences in order to more accurately identify career alignment and long-term fulfillment. This assessment is unique in that it considers three individual

factors of mission, competency, and style and *converges* them in order to triangulate results which illuminate ideal career choices that appeal to and leverage one's purpose, strengths and personality. It does this by also converging one's mission, competency and style with their current role and organizational environment.

As a result, the PRO-D™ assessment tool is designed for self-awareness and to identify career options and leadership development opportunities that emerge when an individual's Missions, Competency, and Style *converge* with their ideal role and organizational fit. The sensitivity and specificity of the PRO-D™ system allows for thousands of possible career choices – far more individualized than traditional vocational instruments.

Theoretical underpinnings of the PRO-D™ tool

The core theoretical underpinning that sets apart the PRO-D™ tool from many of the other personality or style-based assessments is its dualistic understanding of one's self-concept in career choice and leadership development. The self-concept, which guides career choices and leadership development, is often refined through a series of life stages. And while some elements may be stable over one's life, other elements in one's self-concept are more likely to shift based on changes in the environment. For example, in our own database, we have seen one's missions and perceived competencies shift in a test-retest, while style factors tend to maintain more stability over time.

To help theorize this complex concept of self-concept, psychologist Wagner (1971) stated that there are two structures that mediate one's own understanding of themselves. The first is the façade self that reacts to an environment stimulus. This version of self is more likely to respond to prompts from external influences – such as perceived competencies or the perception of one's role and organization. The second structure Wagner proposed is the introspective self that provides the individual with an inner voice. It is in the introspective self where the depth and complexity of one's inner thoughts originate and often where personality factors are identified.

The trouble in reality is that these two selves are constantly interacting with each other while simultaneously responding to the environment. Many traditional career coaching or leadership development tools fail to account for this complex interplay within the dualistic selves and their environment. Rather, common career assessment tools tend to just focus on one aspect of the concept by seeking to measure the façade self, such as one's style in a group. Other tools instead focus on one's introspective self by measuring more stable personality traits. While each of these on their own provide helpful information, for leadership development to be full realized, it is essential for the individual to get a sense of both their façade and introspective selves interacting within a particular context, such as within their role or organizational environment.

In order to understand and measure this complex interplay between one's self-concept and environment, convergence is necessary across multiple social science theories.

And, in order to converge the measurement of multiple constructs the following must be true according to leading researchers (Savickas & Lent, 1994).

- **Accurate:** It permits us to describe occupational behavior accurately.
- **Responsible:** It must empower people to take responsibility for their own lives.
- **Comprehensive:** It must address the full range of circumstances that affect career satisfaction.
- **Integrative:** It must be related to theories in other domains.
- **Adaptive:** It must change and evolve in response to newly discovered anomalies.

The PRO-D™ adheres to these criteria for convergence as it seeks to measure the self-identity which emerges from the interplay of both environmental or social facets as well as more stable personality-based traits that develop overtime. By nature of these theoretical underpinnings the PRO-D™ utilizes instruments grounded in both stable psychology traits and contextual influences on one's self-concept to converge into a more holistic view of who one is at work.

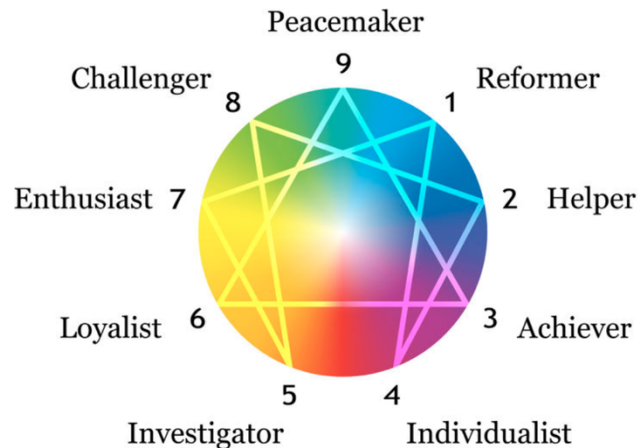

As a result of this theoretical underpinning, the personal discovery process is highly individualistic and plays out in the context of a dynamic, on-going interaction of factors (competencies, motivations and personality factors) within and intrinsic to the individual, while at the same time interacting with numerous powerful, and elusive external variables such as external events and input from significant others such as guidance counselors, family and friends. In the personal discovery process, each individual has a unique set of desired outcomes – at the time of the intervention – which shape the way effectiveness of the intervention must be measured. An individual's specific goals may change over time and the individual will make choices, which set new “variables” in motion.

In addition, the PRO-D™ acknowledges that this interplay between an individual's environment and personality are too complex to measure through just one instrument. Therefore, in order to engage in deep self-reflection to facilitate one's leadership development, there is a need to simplify the complex through the identification of what is most important so that the individual may probe deeper into asking questions that lead to increased probability of obtaining valuable answers.

The PRO-D™ does this by leveraging archetypes that originated from the Enneagram as a map to orient multiple facets of this complexity into one typology. It is the key by which the individual is able to interpret themselves across their mission, competencies and styles while accounting for their contextual work environment. By examining both the façade and introspective selves through this same lens, one is able to engage in more reflective examination of who one is at work.

Using the Enneagram to understand archetypes

The Enneagram is an ancient personality typology with origins in the Middle East that postulates nine personality types. Stemming from the Greek words ennea (nine) and grammos (a written symbol), the nine-pointed Enneagram symbol represents nine distinct strategies for relating to the self, others and the world. The nine personality types are named according to the “need” they represent for the individual. Those who have studied the enneagram believe it can aid in self-awareness, self-understanding and self-development. Its use is becoming more common in organizational settings as its underlying philosophy and principles have proven timeless.

The Reformer	The need to reform
The Helper	The need to be needed
The Achiever	The need for achievement
The Individualist	The need to be unique
The Investigator	The need to understand
The Loyalist	The need for perfection
The Enthusiast	The need to avoid pain
The Challenger	The need to be strong
The Peacemaker	The need to be in harmony

Section II: The PRO-D™ Framework

There are three fundamental features of the framework that the tool serves in order to unlock greater self-awareness around one’s career choices and how one leads.

1. Nine Career Value Area Archetypes: The creators of the PRO-D™ hypothesize that there are nine dimensions or Career Value Areas (termed archetypes) that explain career related behavior and derive from the Enneagram framework. The PRO-D™ postulates to identify the relative importance of all nine archetypes for any one individual. By identifying the three most important archetypes (the dominant triad), the

PRO-D™ is able to offer specific, relevant career insights. The survey has been designed to related back to each of the nine archetypes.

Descriptions of the Nine Career Value Areas (CVAs) are below. Beneath the name of each area is a brief phrase that identifies the key component or *what matters* for this area.

Enneagram Category	Career Value Area	PRO-D™ Definition
The Reformer	Societal Change <i>Influencing Opinions</i>	Influencing Opinions is concerned with effecting change to things around it - society, rules, policies, and government. Strongly held points of views, opinions and beliefs foster deep commitments and desire to influence others.
The Investigator	Theoretical Discovery <i>Answering Questions</i>	Answering Questions is concerned with analysis, determining underlying reasons and facts. It becomes central to "dig deep" and discover root causes for occurrences so as to answer questions and explain why and how something occurred.
The Achiever	Strategic Decisions <i>Managing Plans</i>	Managing Plans is concerned with integrating findings into a collective understanding. Looking at a range of issues, finding patterns, and understanding impacts of alternative scenarios enables effect planning and decision-making.
The Helper	Human Development <i>Helping People</i>	Helping People is concerned with reaching out and assisting others with a need they have. Compassion and empathy create the impulse and commitment to help and resolve issues for others.
The Challenger	Entrepreneurial Challenge <i>Taking Risks</i>	Taking Risks is concerned with generating sufficient energy to create a desired outcome or effect. Overcoming challenge and competing against the elements creates its own rewards of winning and achieving.
The Loyalist	Production Efficiency <i>Maintaining Order</i>	Maintaining Order is concerned with action, order, and accomplishment. Building and hands-on work create tangible results, efficiency, and practical sense.
The Individualist	Artistic Creativity <i>Designing Innovations</i>	Designing Innovations is concerned with thinking new ideas and sharing visions through artistic means. Designing through innovation and interpretation creates new products and unique works of art.

The Peacekeeper	Natural Appreciation <i>Keeping Balance</i>	Keeping Balance is concerned with keen listening and watching out for balance and ensuring people maintain a respect for life. A care for natural order necessitates observing to guard and protect our resources, peace, nature, and public spaces.
The Enthusiast	Motivational Energy <i>Energizing Others</i>	Energizing Others is concerned with motivation and showing enthusiasm so others can be entertained and enjoy certain moments in their lives. Exciting displays of expression enables people to enjoy a break from their routines.

Reliability reporting on nine factors conducted July 2019

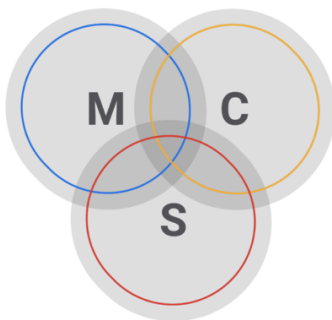

To ensure the existence of nine distinct factors a confirmatory factor analysis was run on a dataset of over 8,500 individuals who have taken the PRO-D™ from 2004 - 2018. The most commonly used method during a factor analysis is varimax, which was chosen for this investigation. Varimax is an orthogonal rotation method that tends to produce factor loading that are either very high or very low, making it easier to match each item with a single factor. During the original varimax analysis eleven distinct factors were found within the dataset and after further statistical examination, two were rejected, thus confirming support for nine distinct factors underlying the structure of the PRO-D™ instrument.

2. Assessment of Individual Mission, Competency and Style

The creators of the PRO-D™ believe that self-awareness is the cornerstone of leadership. Therefore, a comprehensive understanding of the individual is revealed through examining the individual through three core filters of Mission, Competency and Style. The scales used within the survey have been specifically designed to produce a report tying the individual back to these core constructs.

Scored scales creating MCS Results:

- i. Personal Motivators & Area Mission
- ii. Abilities Filter
- iii. Personal Concept
- iv. Personal Expectations

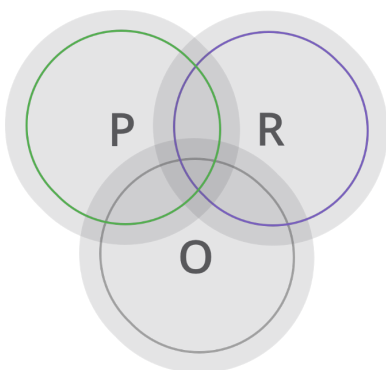

3. Assessment of Individual Person, Role, and Organizational Fit

The creators of the PRO-D™ understand the importance of individual career alignment in career performance. Therefore, a comprehensive understanding of the individual is revealed through examining the individual through the three filters of Person, Role, and Organization.

The Person is a composite picture of the individual based upon their Mission, Competency, and Style results. The Role perspective relates to the individuals' understanding of their role in the organization. The Organization perspective relates to the individual's perception of the organizational culture in which they work. The scales used within the survey have been specifically designed to produce a report tying the individual back to these core constructs.

Scored scales creating PRO Results:

- i. OI PRO 54 Personal
- ii. OI PRO 54 Role
- iii. OI PRO 54 Organization

In summary, the PRO-D™ Tool has been designed to understand the individual according to nine career value area archetypes. This is accomplished by examining them through three different filters of Mission, Competency, and Style as well as three different perspectives of Person, Role, Organization. Each vantage point offers unique perspectives about the individual aimed to increase self-awareness, drive career alignment, and individual performance.

Section III: PRO-D™ Scale Development

There are total of seven unique scales that are used in the PRO-D™ instrument to inform both the propriety algorithm and the creation of the PRO-D™ report. The convergence weighting of each of these scales in the algorithm was derived by clinical professionals and a panel of experts in order to standardized and make consistent recommendations from person to person. The algorithm itself is propriety, but the seven distinct scales that are used to inform the output are described in detail below. Each scale was validated by a panel of experts as described below.

Content Validity

Item consideration and selection underwent an extensive process and involved many experts in the areas of education, psychology, surveying, testing, and career counseling. Most influential was the review conducted by the Princeton Testing Group in the early 2000's. This group met several times to review and revise individual items, as well as review and update program materials and applications. Thus, we are confident that our items sufficiently measure the constructs they are intended to.

The Princeton Testing Group Participants

- Dr. Tom Bachhuber, President, Bachhuber and Associates
- Victoria I. Ball, Dir. of Career Planning & Placement, Brown University
- Dr. Eric R. Braverman, President, Princeton Assoc. for Total
- Henry P. Bristol, II, Principal, Pikaart-Bristol Associates
- David H. Collins, President, Obik, Inc., TranZitions, Inc.
- George H. Gallup, Jr., Co-Chairman, Gallup Organization
- Dr. Mary J. Gregerson, Professor of Psychology, George Washington Univ.
- John G. Patterson, English Teacher, Curriculum Consultant, St. Paul's School
- Kathy S. Worgul, Independent Counselor, University of Texas

Scale Descriptions

Personal Motivators & Area Missions: *Understanding one's missions*

The Personal Motivators & Area Missions are propriety tools designed to identify mission and interest class types using general descriptive words (i.e. Integrity, Wealth, Innovation). Each of the two instruments present 27 descriptive words that represent the 9 Mission Class Types (three words per class type). The tools yield scores on nine scales, each scale representing a Mission Class Type. The instruments are completed in three steps. The user first selects any words that they find important, then select the top 7 and finally the top 3 for each scale.

Abilities Filter: *Understanding one's competencies*

The Abilities Filter is a propriety tool designed to identify Competency Class Types (CCT) using short phrases that represent a variety of tasks (such as "using technical computer software" and "dreaming up new project ideas". The instrument presents 63 phrases that represent competencies specific to the nine archetypes (7 phrases per CCT). The tool yields scores on nine scales, each scale being a CCT.

Personal Concept: *Understanding one's style*

The Personal Concept is a forced choice, self-assessment that is designed to increase self-understanding to optimize interpersonal and supervisory relationships. The Personal Concept was developed by Jack Mohler Associates (1980) and is based upon the work of Martson (1928). Martson's theory characterized behavior along two dimensions – actions (active or passive) and perceptions of the environment

(antagonistic or favorable). This scale is used to feed insights into the final PRO-D™ report to help with communication style.

Personal Expectations Inventory (PXI): *Understanding one's style*

Designed to measure individual employees' expectations and perceptions, which underlie their behavior. The development of the PXI was based on Kovach's Personality theory from the Leadership Development Institute. Kovach postulated that cognitive frameworks (also termed "sets of expectations") are primarily determinant behavior. These expectations vary along a continuum of flexibility-rigidity and vary according to their information processing (IP) function (i.e. acquiring information, processing information and responding to information). The PXI was designed to elucidate the various IP functions. The PXI is a 72-item questionnaire (12 items per six sub-scales) that asks respondents "How often do you agree with each statement", such as "It's difficult to try when people keep criticizing you."

OI PRO 54 PERSON/ROLE/ORGANIZATION Scales: *Understanding oneself and the environment at work*

PERSON: The OI PRO 54 Person is a proprietary tool designed to identify Style Class Types (SCT) using one or two world qualitative descriptors (i.e. lively, ethical, moral) that relate to how you are or what is important to you at work. There are 54 item (6 items per 9 SCT) and yields scores on the nine scales, each scale being a SCT.

ROLE: The OI PRO 54 Role is a proprietary tool designed to identify Role Class Type (RCT) using short phrases (i.e. be open and flexible, ensure perfect quality) that relate to jobs, roles, and work. There are 54 items (6 items per 9 RCT) and yields scores on nine scales, each scale being a RCT.

ORGANIZATION: The OI PRO 54 Organization is aa proprietary instruments designed to determine the client's perception of the organizational culture (e.g. people-oriented, precise). There are 54 items (6 items per 9 SCT) and yields scores on the nine scales, each scale being an OCT.

Section IV: Statistical Analysis

In July 2019 a rigorous validation project was completed to confirm the validity and reliability of the propriety scales found within the PRO-D™. The following are the statistical analysis and output of the validation. The total database used in the validation was 8,560 adult participants who had taken the PRO-D™ from 2004-2018.

Table 1. Age Characteristics

GENDER	% OF SAMPLE (N=)
MALE	53.% (4,559)
FEMALE	46.7% (4,001)

Table 2. Generational Representation

GENERATION	% OF SAMPLE (N=)
GEN Z	7% (489)
MILLENNIALS	28% (1,991)
GEN X	36% (2,603)
BABY BOOMERS	28% (1,969)
VETERANS	1% (47)

Note: Age is an optional field and was reported by 7,099 participants in the validation database

Reliability

Internal Consistency

In order to test whether the individual scales that compose the PRO-D™ battery are internally consistent, coefficient alpha was computed on several tools by archetype (CVA). The vast majority of the scales demonstrated solid internal reliability with alpha values at or above .65.

Table 3: Cronbach Alpha Reliability Scores for Proprietary Scales

ABILITIES SCALE	ALPHA SCORES
CVA 1: INFLUENCING	0.86
CVA 2: ANALYZING	0.89
CVA 3: MANAGING	0.86
CVA 4: HELPING	0.80
CVA 5: DRIVING	0.87
CVA 6: PRODUCING	0.66

Observe	.371	.211	.306	.281	.407	.384	.391	1	
Express	.373	.033	.096	.455	.465	.137	.221	.298	1

Note: All correlations reported are statistically significant at $p < .001$.

Section V: Appendix

The PRO-D™ utilizes the following logic convention to match each CVA back to a career field in order to help provide deeper insights into the career and context one chooses to apply their leadership skills.

1 Societal Change: Understanding Society & Its People

This career area is made up of people that enjoy learning about society, past and present. People who like understanding change and how people think and live, are interested in Culture, History, & Politics. Included here are the politicians, philosophers, journalists, ambassadors to foreign countries, and courtroom clerks. Knowing “what is going on” and “what happened in history” is central to those involved here.

9 Primary job fields found in the Cultural World:

Current Affairs:

1. Culture & Sociology
2. News, Media & Journalism
3. Advocacy

Government:

4. Politics
5. Judicial Services
6. School Systems

Customs:

7. History
8. Philosophy & Religion
9. Economics

2 Theoretical Discovery: Solving Today’s Problems Using Science

This career area is made up of people who like to research and analyze and solve problems. People who like to investigate and use their minds to continually question the world’s intricate issues like Research & Science. Included here are the researchers, scientist, computer experts, librarians, engineers, and botanists. Information searching, labs, statistics, and technological experiments mark the days of those involved here.

9 Primary job fields found in the Science World:

Development:

1. Product Testing, Validation, & Proving
2. Engineering
3. Technology

Data:

4. Information & Data Research & Processing
5. Mathematics & Statistics
6. Computer Programming & Systems Analysis

Scientific Research:

7. Laboratory Studies

8. Medical Science
9. Modeling (Behavioral & Decision Sciences)

3 Strategic Decisions: The World of Commerce and Making Things Happen

This career area is made up of professionals. People who want to make money, work in offices, and interact on a professional level typically like the jobs found in Business 7 Work. Included here are the accountants, lawyers, business people, stockbrokers, administrative assistants, salespeople, and advertising executives. Office buildings, prestige, and professional services mark the days of those involved.

9 Primary job fields found in the Professional World:

Marketing:

1. Strategy & Development
2. Sales & Promotion
3. Advertising & Public Relations

Executive

4. Legal Services
5. Finance
6. Consulting

Administration

7. Information Services
8. Human Resource & Support Services
9. Management & Policies

4 Human Development: Caring for People's Needs

This career area is made up of people who want to help others. These people are good listeners, friends, and enjoy being in service to others. Included here are the counselors, rescue workers, doctors and nurses, community servants, religious leaders, and teachers. Trying hard to improve people or the world's situation is central aim of those involved and committed here.

9 Primary job fields found in the Service World:

Service:

1. Human Services & Personal Development
2. Counseling & Ministry
3. Social Work

Education

4. Teaching
5. Training & Coaching
6. Academic Development

Care & Relief

7. Health Care
8. Emergency Management & Relief
9. Agency Work

5 Entrepreneurial Challenge: Pursuing Answers to Mysteries

This career area is made up of people who have a deep interest in the unknown, puzzles, uncharted territories, and especially adventure. People who are willing to challenge themselves and enjoy risking everything can be found in the Discovery & Exploration area. Included here are the skydiving instructors, astronauts, entrepreneurs, private investigators, and cutting-edge inventors. Pursuing new paths and new answers mark the days of those involved here.

9 Primary job fields found in the Exploration World:

Discover:

1. Frontiers
2. Intelligence
3. Mysteries

Innovation

4. Invention
5. Entrepreneurism
6. New Applications (process re-design, corporate change, etc.)

Daring

7. Thrill Seekers
8. Emerging Trends
9. Cutting Edge Technologies

6 Production Efficiency: Constructing and Repairing Items

This career area is made up of people who like work involving hands-on activity. People who typically like to get their hands dirty like this Build, Fix & Protect area. Included here are the builders, developers, supervisors, police chiefs, airline controllers, and electricians. Tangible products, machinery, and hard work mark the days of the those involved here.

9 Primary job fields found in the Operations World:

Commerce

1. Transportation, Shipping & Logistics
2. Real Estate & Commercial Development
3. Retail

Production

4. Construction, Building, Maintenance, & Repairs
5. Manufacturing
6. Hands-on Operations

Protection

7. Military Services
8. Police, Fire & Municipal Services
9. Security Systems & Regulation

7 Artistic Creativity: Expressing Inner Creative Energies

This career area is made up of people who love art or artistic expression. People want to make a statement, see things differently, and must incorporate their creativity will become involved with the Arts & Aesthetic career area. Included here are the artists,

musicians, writers, film makers, and designers. Appreciating “how things are done” and “how they look” becomes the core issues here.

9 Primary job fields found in the Artistic World:

Creation

1. Studio Art & Musical Composition
2. Creative Writing
3. Film & Photography

Appreciation

4. Critiques
5. Design
6. Museum & Decoration

Expression

7. Music
8. Theater
9. Performing Arts

8 Natural Appreciation: Appreciating & Protecting Nature

This career area is made up of people who have concern for and appreciation of nature and the environment. People who want to spend most of their time outdoors like the Environment & Outdoors career area. Included here are the park rangers, gardeners, environmentalists, farmers, zookeepers, and foresters. A commitment to the value and beauty of nature, animals, and our land lies at the heart of this area.

9 Primary job fields found in the Natural World:

Outdoors

1. Parks & Land
2. Outdoor Activities & Fitness
3. Vegetation & Wildlife

Environment

4. Conservation
5. Protection
6. Stewardship

Cultivation

7. Agriculture
8. Gardening & Horticulture
9. Extraction (mining, fishing of the oceans, etc.)

9 Motivational Energy: Helping People Enjoy Life

This career area is made up of people who like to create fun. People who like to show people a good time and make people happy will enjoy the Leisure, Recreation & Entertainment career area. Included here are the entertainers, owners of resorts and nightclubs, professional athlete, cooks, nutritionist, and stylists. Long hours, but fun time and excitement mark the days of those involved here.

9 Primary job fields found in the Recreation World:

Leisure

1. Travel, Tourism, & Hotels

2. Hobbies & Events
3. Personal Appearance

Fitness

4. Nutrition
5. Athletics
6. Health Clubs/Spas

Environment

7. Professional Sports & Gaming
8. Dramatics (Theater, Film, TV, Video Games, Amusement Parks, etc.)
9. Restaurant & Hospitality
